AWS-6100 System with Pulsed Yag Lasers

To make the lowest heat input welds with minimal labor cost, Weldlogic has developed a line of Pulsed Yag lasers combined with our standard line of circumferential welding stations to offer you a single turn key solution.

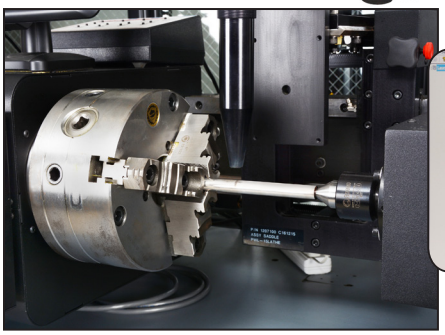

Our Precision Welding Lathes offer the end user 30 years of development and refinement. In brief a highly productive yet flexible work cell.

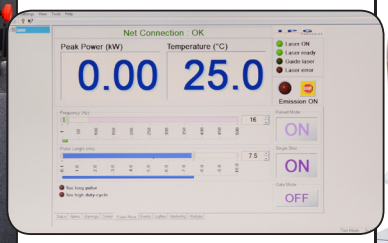

Our engineering and manufacturing group take full responsibility for your system , tooling and process development if desired.

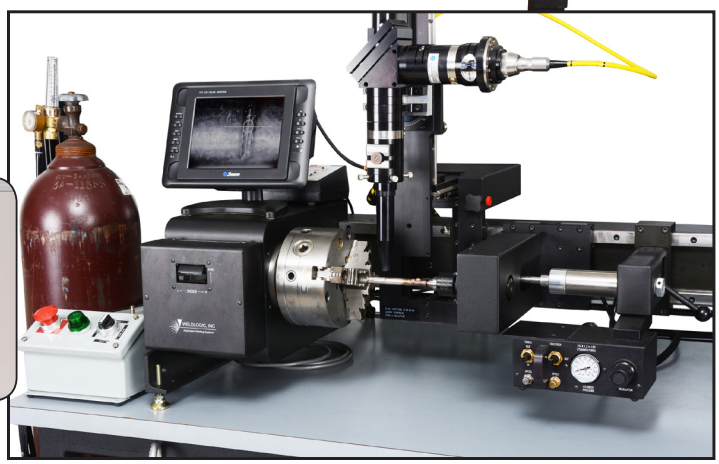

Contact us to learn about all the various options we offer.

Lathe can be oriented horizontally (as shown) or vertically
